

REPLACEMENT ABSTRACT

A cleaning system for cleaning a water supply apparatus includes a cleaning agent vessel containing a cleaning agent that is supplied to the water supply apparatus. The water supply apparatus has a recirculation circuit for recirculating water within the water supply apparatus. The recirculation circuit is controlled by a first control unit. The cleaning system also includes a cleaning system control unit configured to cause recirculation of the supplied cleaning agent through the recirculation circuit of the water supply apparatus by controlling the first control unit.
